

EPSON

COVERPLUS

Extended Warranty

2 Year Onsite Warranty Service to be provided for local purchase only.

The warranty service can be extended by purchasing Epson Coverplus Extended Warranty. For more information, please contact Epson customer support.

For Standard warranty terms & conditions, please refer to <https://www3.epson.com.hk/eservice/tcs.html>

Bold, Bright, Beautiful...
3LCD Technology

3LCD technology achieves bright, natural images and smooth, sharp video playback. No color break-up makes images gentle on the eyes.

Optical unit with high light-use efficiency

EPSON

EXCEED YOUR VISION

Suitable for using in
large school hall or big venue

Superior Projection Quality

High System Functionality

Superior Installation Flexibility

High Reliability

High Maintainability

Superior projection quality

Vivid image reproduction

3LCD

3LCD technology achieves excellent gradation along with smooth color change for superlative picture quality that is virtually noise-free and easy on the eyes.

Color Light Output

Amazing color brightness for brilliant image quality

One brightness measurement (lumens) is not enough. A projector's specification needs to show both high color brightness and high white brightness. If color brightness is lower than white brightness, images may be dark, dull and lose detail. If not provided, be sure to ask for a projector's color brightness specification.

Get consistent, true-to-life color with Epson, whether you're projecting images with deep, dark colors or a white screen with text..

Epson Cinema Filter

The inclusion of the newly developed Epson Cinema Filter has made it possible to achieve both high brightness and accurate color reproducibility. It is possible to project still images and video with colors that match sRGB standards.

Comparison of color reproduction gamuts: EB-Z10000U Theatre Mode vs. sRGB (international color standard established by IEC)

Bright high-resolution images

High brightness 11000lm

(EB-Z11000W / EB-Z11000)

The Epson-developed dual-lamp optical engine has made it possible for a 3LCD projector to achieve 11,000 lm brightness.

Even on the large screens in large conference rooms, large lecture halls, and event halls, it is possible to project with overwhelming image quality and no loss of vividness.

High resolution WUXGA

(EB-Z10000U / EB-Z9870U / EB-Z9750U)

Epson was the first to offer WUXGA resolution(1920x1200) for 3LCD projectors, enabling high-resolution image display, even with full HD video (1920x1080). Even on large screens, images maintain sharp, vivid detail, for a dynamic viewing experience.

Enhanced beauty for video playback

Frame Interpolation

(EB-Z10000U / EB-Z9870U / EB-Z9750U)

By analyzing the images frame by frame and generating/inserting intermediate frames, even for sports and other fast-moving subjects, it is possible to enjoy smooth video with reduced perception of afterimages.

*Simulated image of frame interpolation.

High contrast 15000:1

A more "real" feeling of contrast is achieved through the use of Epson-developed C² Fine panels and the Auto Iris function.

Without Auto Iris/Epson Cinema Filter

With Auto Iris/Epson Cinema Filter

*Simulated image

C²FINE

Super-resolution technology

Epson's Super-resolution technology gives razor sharp images even when projecting low resolution content onto large screens. Rapid motion remains crisp since image data is processed frame by frame.

Without Super-resolution technology

With Super-resolution technology

*Simulated image

DICOM SIM mode

This color mode produces images with clear shadows, ideal for projecting X-rays and other medical images.

*This projector is not a medical device and cannot be used for actual medical diagnosis.

*Simulated image

High system functionality

Borderless multi projection

Point Correction & Edge Blending & Color Matching & Black level

A variety of functions are included to enable adjustments to be easily made when doing multi projection. "Point Correction" enables fine adjustment of image position. "Edge Blending" adjusts the brightness of overlapping image areas to give images a borderless feel. "Color Matching," "Brightness Level," and "Multi Projection" color mode correct for brightness and color differences resulting from variations between individual units, thereby making it possible to project a perfectly unified image. "Black Level" matching makes adjustments to produce natural-feeling contrast.

Before Correction

- Positions of the projected images do not match.
- Colors and brightness don't match.
- Overlapping areas are bright.

Point Correction

- Image positions are corrected with Point Correction.

Edge Blending

- Brightness of the overlapping areas is adjusted to give images a borderless feel.

Color Matching/Brightness Level

- Projector brightness and color variations are corrected to produce perfectly unified images.

Black Level

- Contrast is adjusted to achieve natural-looking images.

Scale function

The projector has internal functions for image magnification and cropping. Simple multi projection can be done without using external equipment.

Diverse image-space creation

Curved Surface

When projecting to a curved surface, this function makes it easy to quickly and precisely correct any vertical or horizontal distortion of the projected image.

Corner Wall

This function allows you to adjust the projection shape and display images clearly on a corner wall.

Portrait projection

Portrait projection is supported. Enabling projection of the full image, this is useful for the kinds of images suitable for digital signage.

*The projector cannot be set up vertically on its own. A separately sold frame is necessary. Also, the filter side must be facing down.

*The replacement cycle for the portrait lamp is 1,000 hours.

Frame

A special frame is newly available for convenient carrying and stacking. Projection screen adjustments can be easily made since a projection position adjustment function is provided.

Landscape projection

Portrait projection

Stack projection

Point correction

Correct misalignment on screen when using multiple projectors, and distortion when using a single projector. Even with large screens, you can still quickly fine-tune the image, adjusting point by point from right to left or up and down, using a projected 9 x 9 matrix at a maximum.

Color adjustment function

The color adjustment function enables adjustment of hue, saturation, and brightness for each component of RGBCMY. Color can be adjusted to match your preferences.

Superior installation flexibility

High installability

Interface

A diverse range of input terminals is provided. 3G-SDI and HDBaseT for long-distance transmission are also supported.

3G-SDI/HDBaseT

3G-SDI and ELPHD01 provide Full HD Video transmission capability, Audio and Ethernet, while the 3G-SDI cable enables signal control with over 100 meters of above category 5e cable*, making them ideal choices for large venue installations.

*STP (Spanning Tree Protocol) is recommended.
**HDBaseT and the HDBaseT Alliance logo are trademarks of the HDBaseT Alliance.

Extensive optional lenses

The extensive line of optional lenses make it possible to handle diverse installation environments. With the addition of the ELPLU02 short-focus zoom lens to the line, installation at short distances is now possible.

Lens Shift

The wide-range motorized lens shift provides a high level of installation freedom. With motorized lens shift, adjustments can be made via a remote control or a network so the projector is easy to operate even when it is suspended from the ceiling.

Split Screen

Split Screen allows inputs from two separate sources to be displayed side by side on the same screen. In a video conference, for example, images of presentation materials and remote participants can be shown simultaneously

Center lens design

A center lens design is used. This facilitates design and installation when the projector is suspended from the ceiling. The symmetrical design enables the projector to harmonize with the space.

Wide operation area of remote controller

A range of up to 30 meters gives the remote controller a wide area of operation. This is great for use in lecture halls, gymnasiums, and other places accommodating a large number of people.

Web Control

By connecting the projector to a network, it is possible to adjust the projector installation entries from a PC or tablet.

Mechanical Shutter

There is a mechanical shutter that can totally black out the screen. This is convenient for black-out use when you want to stop the image from displaying temporarily.

Tool free operation

The time and effort required for installation are reduced because it is possible to open/close the interface cover and change lenses without using tools.

Cloning function

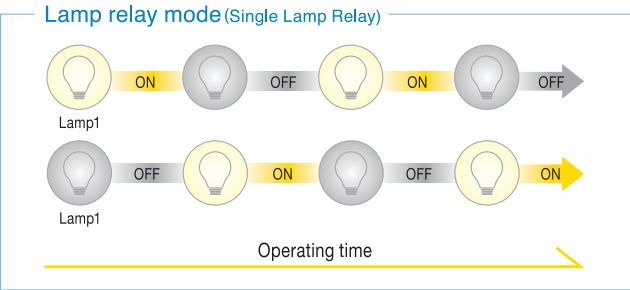

When dealing with multiple projectors, it is now possible to copy the OSD menu setting for things like user logos or color modes and transfer the settings to multiple machines via USB/ network. This function helps to reduce installation and set-up time.

Superior reliability and maintainability

High Reliability

Lamp Relay

With Epson's original two-lamp system, even if one lamp burns out, it is possible to continue projecting without replacing it. In addition, "Dual Lamp Relay" and "Single Lamp Relay" have been newly added. With "Single Lamp Relay," by defining a discretionary time, it is possible to have the lamps project in turns, and this extends lamp time by up to a factor of two.

Dust proof engine

The optical engine has a high level of sealing performance. Dust-caused image quality degradation is reduced with a design that makes it difficult for dust and other particles to penetrate.

Cooling system

In addition to air cooling, Epson's original liquid cooling system is also employed. This enables reliable operation in a wide variety of environments, even with ambient temperatures of up to 50°C.

*Only support EB-Z10000U, Z10005U, Z9870U, Z9875U, Z11000W, Z9900W, Z11000, Z11005

Durable body

The body has been greatly strengthened with the placement of a metal base plate on the bottom surface, and the integration of a reinforcing plate on the top surface.

Status Monitor

On the body there is an LCD panel where the status of the projector can be checked. Since information ranging from the projector's basic status to network settings is displayed on the status monitor, the status can be confirmed without turning on the projector.

High maintainability

Lamp

The structure enables lamps to be removed from the back of the projector so lamps can be easily replaced even on a suspended projector left in place. It is also possible to do the replacement without using tools.

Air Filter

The projector uses an air filter that efficiently collects dust and that has a 10,000-hour maintenance period.
